1.

- a) The question/ objective is to efficiently and effectively allocate temporary medical staff for the upcoming influenza season in the USA. **Q: To which US States will we allocate temporary medical staff, to help alleviate the strain on medical resources in the upcoming influenza season?**
- b) Discuss the most vulnerable population groups, and show mortality rates for these groups, compared to others. Then focus on the 65+ age group. Show their distribution across the states and highlight mortality rates (because larger populations will generally have higher count of influenza deaths. Discuss which is more important: death count or mortality rates.
- c) Show the condensed results/conclusions of the analysis with a written recommendation for which states are a priority.
