- a) I have decided to count the total number of deaths for the two age groups. In this case I think it is a good idea to use a pie chart: There are only two variables being compared, and the difference between the two variables can be easily seen. This chart shows the comparison of two total values well: In this case, the death counts for under and over 65 years of age.

Number of Influenza Deaths in USA by Age Group (2009-2017)
